

Hi I am a grassroots republican supporter for bush in my local community also A business owner and college bound student I benefit from xm radio everyday and weather especially knowing what is going be like where I am at exact location and traffic updating i also have these services provided via onstar which is a great service and I think it is unconstitutional for anyone especially the multi billion dollar companys to try and take away from new advanced companys such as xm and sirus satalite radio and futhermore if the am \fm companys want to improve why dont these companys just broadcast via digital fm wave almost same quality via xm i am a payer for this service and its not fair we ther customers have a service we pay for taken away so please reject nab peition 04-160 also my neighbor is senator daniel lee no not very high up on your poltical scheme maybe should get over politions involved in this minor issue that shouldnt even be brought up when this country has more important domestic and foreign issues to look at xm via GPS or LBS services do not present any sercurity issues same as a telematic service such as onstar would present thank you for your partonage and time please see that my voice does get heard!!!!!!

In best regards,

Joshua D Arnold
